Find Product

<div align="right">Ended</div>

Description

- You are given five numbers stored in variables with the following names

```
one, two, three, four, five
```

- Find the product of the five values, and print it

Input

The first and the only line of the input contains five values, stored in the variables `one, two, three, four, five`

Output

Print the product of the five values stored in the variables `one, two, three, four, five`

Sample Input 1 📋

```
1 2 3 4 5
```

Sample Output 1

```
120
```

Hint

In the sample test case, the values stored in the variables are `one = 1, two = 2, three = 3, four = 4, five= 5`

The sum of the values is `1 * 2 * 3 * 4 * 5 = 120` , which is the required sum
